

## Fire Safety inspection of reels & fire hydrants

Vinçotte provides periodic inspections of fire hydrants and reels.

### Your tailor-made solution

#### Fire reels

The fire reel, or armed fire damper, is a fixed fire-fighting device located in buildings and 'ready to use' thanks to its permanent connection to the water source. Moreover, any non-specialist can act when a fire breaks out thanks to its rapid deployment and ease of use.

During our inspections, we check, among other things, accessibility, visibility, the presence of operating instructions and the absence of deterioration, corrosion or leaks. We can also perform a pressure test, unwind the hose along its entire length and perform a water flow test.

#### Your result

#### Please note

#### In which situation?
